

Child victimization, also known as child abuse and neglect, is “any recent act or failure to act on the part of a parent or caretaker which results in death, serious physical or emotional harm, sexual abuse or exploitation; or an act or failure to act, which presents an imminent risk of serious harm.”¹

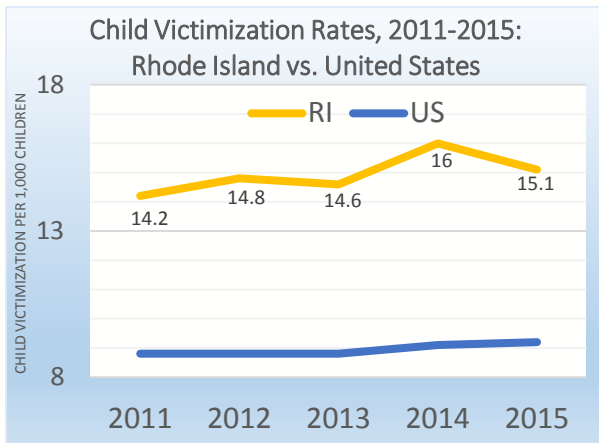

Figure 1. Source: National Data Archive on Child Abuse and Neglect (NCANDS).^a

➤ Rhode Island child victimization rates have consistently surpassed the nation over time, reaching almost twice the national rate in 2015.

➤ In 2016, among the 39 communities in Rhode Island, child victimization ranged from about 2 child victims per 1,000 to almost 30 child victims per 1,000.

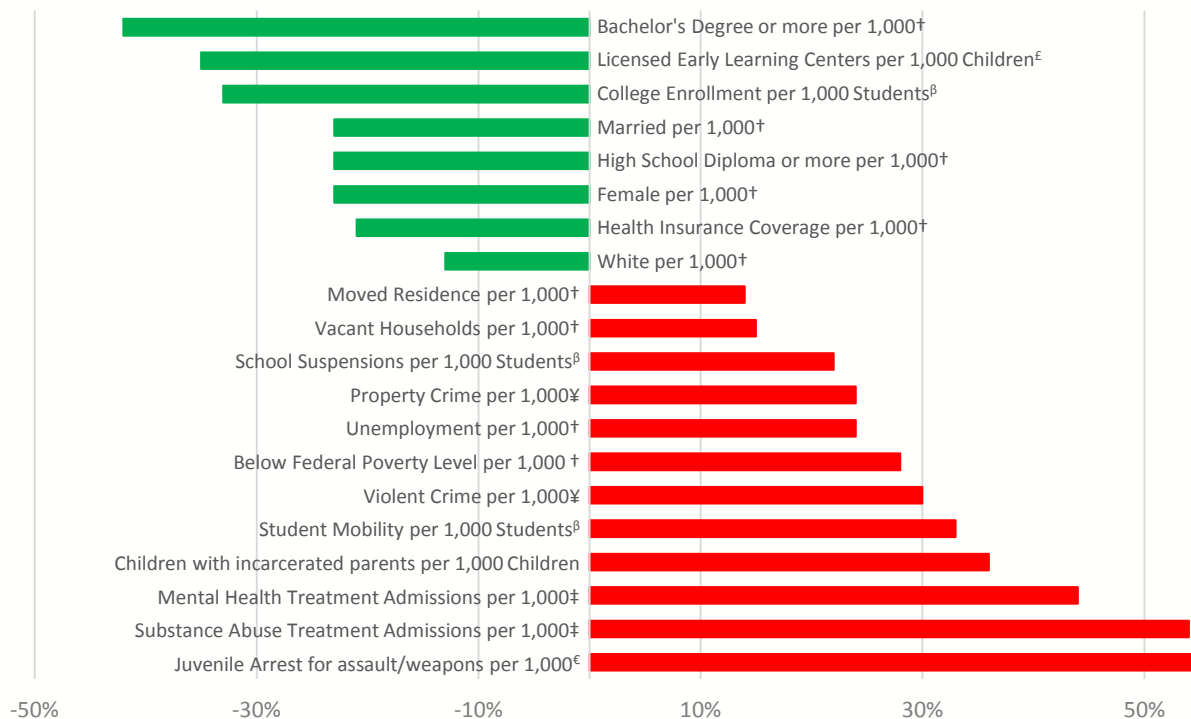

Figure 3. Social-Ecological Model of Child Victimization.²

Child victimization is impacted by factors at the individual, relationship, community, and societal levels. Social and ecological factors include the setting for child maltreatment such as schools, workplaces, and neighborhoods.²

In Rhode Island, many social and ecological characteristics are associated with higher child victimization rates: poverty, crime, substance abuse and mental health burden, unemployment, and mobility. Other characteristics are associated with lower child victimization rates: towns with greater health insurance coverage, married, female, and white populations, higher levels of education, and more availability of early learning centers.

Social-Ecological Characteristics Associated^c with Childhood Victimization: Rhode Island 2016

Social and ecological level childhood victimization prevention requires involvement across sectors such as education, government, social services, health services, business/labor, justice, housing, media, and other non-governmental organizations. ³

Atlanta, GA: National Center for Injury Prevention and Control, Centers for Disease Control and Prevention.

^a The number of victims is a unique count of children with substantiated maltreatment investigations. Rates were calculated by dividing the number of victims by the child population and multiplying by 1,000.

^b Data unduplicated by child; child victims with out-of-state or unknown case address are excluded; child victims of maltreatment in foster care are excluded. rates were generated based on child population estimates from American Communities Survey 2012- 2016 Aggregated 5 year estimates.

^c Poisson Regression was used to model child victimization counts with offset of child population in each community from American Communities Survey 2012-2016 Aggregated 5 year estimate. All characteristics had statistical significance at $\alpha=0.05$. All covariates were transformed to a standard normal distribution for ease of relative comparison. Data source for child victimization is RICHIST fiscal year 2016; data unduplicated by child; child victims with out-of-state or unknown case address are excluded; child victims of maltreatment in foster care are excluded.

^d Juvenile arrests for assault/weapons offenses data are from Mongeau, T. & Tocco, G. (2017). 2016 juvenile detention data. Providence, RI: Rhode Island Department of Public Safety, Grant Administration Office.

^e Data source Rhode Island Department of Corrections 2016; children of incarcerated parents is the number of children with parents serving sentences at the Rhode Island Department of Corrections per 1,000 children under age 18; data are reported via place of parent's last residence before entering prison and do not include Rhode Island children who have parents incarcerated at other locations.

^f Data source Rhode Island Department of Education, 2015-2016 school year; student mobility defined as the number of students who enrolled in school after September 30 or withdrew from school before June 1 divided by the total enrollment for that school district; school suspensions per 100 is out-of-school suspensions for the school district at all grade levels divided by student enrollment multiplied by 100; % college enrollment is the percentage of high school graduates who enrolled in a two- or four-year college within 6 months.

^g Data source RI Early Care and Education Data System; Licensed centers include child care programs, preschools, nursery schools, and center-based Head Start and Early Head Start programs; rates were generated based on child population estimates from American Communities Survey 2012- 2016 Aggregated 5 year estimates.

^h Data source for crime is Uniform Crime Reports (UCR) 2015; rates were generated based on adult population estimates from American Communities Survey 2012- 2016 Aggregated 5 year estimates.

ⁱ Data source for Mental Health and Substance Abuse Admissions is BHOLD fiscal year 2016; data unduplicated by patient; patients with out-of-state or unknown addresses are excluded; rates were generated based on adult population estimates from American Communities Survey 2012- 2016 Aggregated 5 year estimates.
